Postdoc opportunities in Professor Jintai Lin's group in the Department of Atmospheric and Oceanic Sciences, School of Physics, Peking University

Professor Lin's group is focused on multi-disciplinary studies of atmospheric environment. His research covers chemical transport modeling, satellite remote sensing, AI for environment, and climate change, with a particular interest in the sources of pollutants and greenhouse gases and the interdisciplinary exploration of globalizing air pollution.

Postdoc positions are available for those with backgrounds in mathematics, physics, chemistry, atmospheric sciences, environmental sciences, remote sensing, geography, or environmental economics. CV is needed for initial contact.

Various postdoctoral opportunities, with different amounts of compensation:

1. Solely supervised by Prof. Lin;
2. Co-supervised by Prof. Lin and Dr. Hang Su at CAS/IAP, focusing on satellite remote sensing and AI for atmospheric environment;
3. Co-supervised by Prof. Lin and collaborators in Shanghai AI Lab, focusing on AI4Earth;
4. Co-supervised by Prof. Lin and collaborators in the National Satellite Meteorological Center, focusing on algorithm development and applications of FY satellites.
